

The company

The Company was founded by Mr Reinhard Suttner in September 1970. So we can go back to a long experience in the engine construction.

After now 35 years we have build up worldwide business relations and deliver with UPS to every conceivable place where engines and engine parts are used!

Permitting long-standing experiences with our suppliers like [Mahle](#), [KS](#), [Elring](#) we can rebuild an engine with high quality but nevertheless economical.

We work on any kind of internal combustion engines and compressors. And is it not possible that you can deliver a vehicle or an engine to our factory - no problem, on request we also come to the object on the spot (for example stationary engine, building machines, boats) and will find a solution for the repair.

If you need a route planning, please take advantage of our [road map](#). We are directly due to the BAB 3. Please, in case of further questions use the [contact form](#).
